Oxytet 100
(oxytetracycline hydrochloride injection)

BROAD-SPECTRUM ANTIBIOTIC FOR USE IN
BEEF CATTLE, BEEF CALVES, NON-LACTATING DAIRY
CATTLE AND DAIRY CALVES

Proven, Reliable Performance
Oxytetracycline is effective against a wide range of
gram-negative and gram-positive organisms that
are pathogenic for cattle. Oxytet 100 is indicated for
treatment of:

- Bacterial pneumonia and shipping fever complex
  associated with Pasteurella spp.
- Bacterial enteritis (scours) associated with
  Escherichia coli
- Necrotic Pododermatitis (Foot Rot) associated
  with Fusobacterium necrophorum
- Calf Diphtheria associated with Fusobacterium
  necrophorum
- Wooden Tongue associated with Actinobacillus
  lignieresii
- Wound Infections; Acute Metritis; Traumatic Injury
  caused by oxytetracycline-susceptible strains of
  streptococcal and staphylococcal organisms

Oxytet 100 Offers These Proven Advantages:

- Broad-spectrum
- Administer intravenously (IV) in cattle
- FDA approved
- Available in 500 mL, multi-dose bottle

Read the entire insert for full disclosure and
warnings prior to use.

Observe label directions and withdrawal times. Not for use
in lactating dairy animals or in calves to be processed for
veal. Adverse reactions, including injection site swelling,
restlessness, ataxia, trembling, respiratory abnormalities
(labored breathing), collapse and possibly death have been
reported. See product labeling for full product information.
The intravenous injection of 3 to 5 mg of oxytetracycline-susceptible bacteria will help considerably in stopping the flow of blood through the needle indicates that the vein has been entered. The vein has a tendency to move slightly toward the head or toward the heart. Properly positioned this way, a quick thrust of the needle into the vein will confirm the fact that the vein is properly entered.

PREPARATION OF EQUIPMENT

PRECAUTIONS

If no improvement occurs within 24 to 48 hours, consult a veterinarian. Do not use the drug for more than 4 consecutive days or doses higher than maximum recommended dose may result in antibiotic tissue residues beyond the withdrawal period.

WARNING

For use in Beef Cattle, Beef Calves, Non-lactating Dairy Cattle and Dairy Calves Only

Discontinue treatment with Oxytet 100 at least 22 days prior to slaughter of the animal. Not for use in lactating dairy animals. A withdrawal period has not been established in prepuberal animals. Use in milk-producing animals may require a prolonged period of withholding prior to slaughter. It is recommended that the correct dose be given at the first sign of the disease.

ANTIBIOTIC ACTION OF OXYTETRACYCLINE

Each mL contains 100 mg Oxytetracycline HCl.
